**B.tech IT**

**Bharati Vidyapeeth Deemed University Pune**

**Project:- Corporate Business Domain**

## **ABOUT PROJECT**

Our aim is to create an Corporate business WebPage which is robust in todays Industry.

## **Benefits**

- More available space for Business and Corporate.
- Helps maintain consistency of website.
- Easier to Expand Business.

## **Technologies and Tools used**

- Wordpress
- Xampp Application
- Plugin

- **Elementor**
- **All in one wp migration**

## **FUTURE USE**

In future, we aim to develop more Business strategy option which can further increase the portability of the application. Apart from that, we will also integrate chat and account option. Using Chatbot we would also implement a methodology to allow users to have their own views for solving their problem in efficient way. Further mechanisms of user authentication and security can be implemented to ensure no security breach takes place.

## **SPS-8109-Corporate-Domain**

Corporate Domain

## **Prerequisites**

To start the Project need to install few pre-requisites listed as follows:

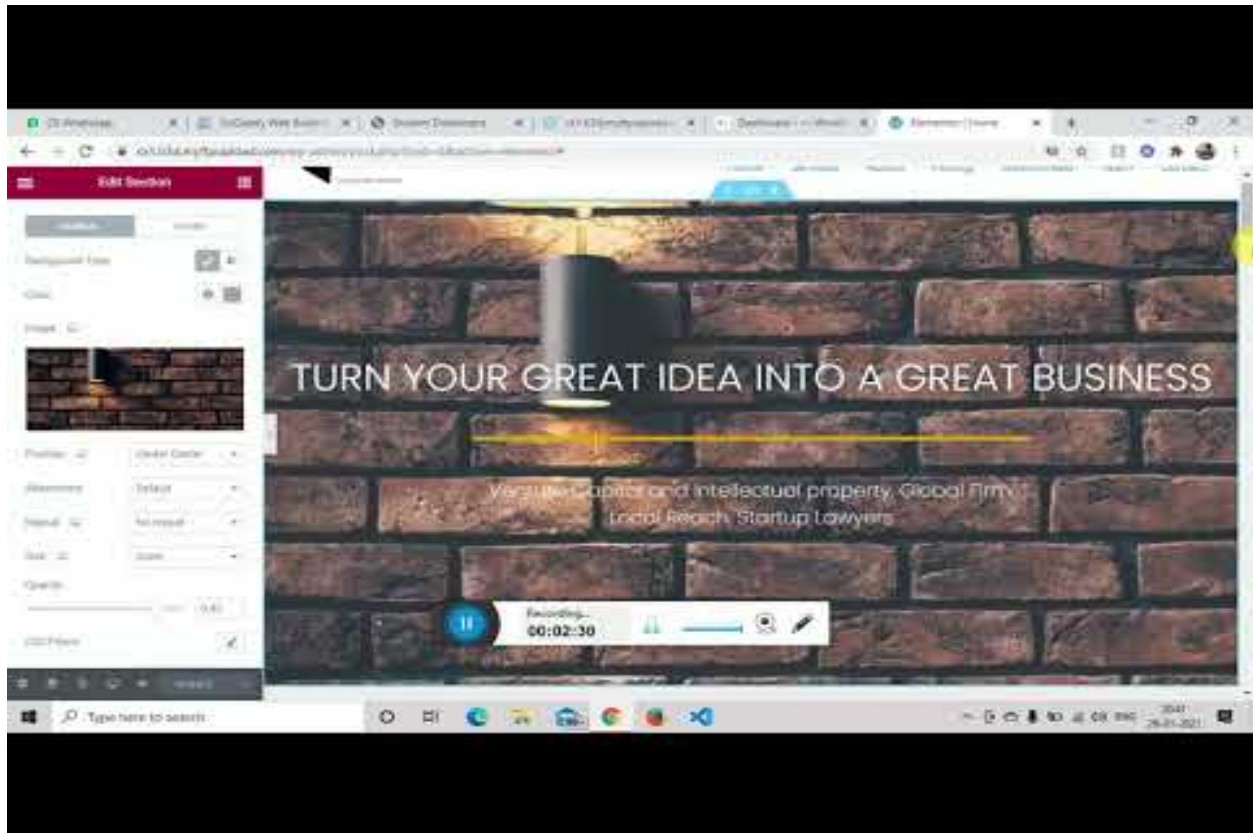

-Xampp Server

-WordPress

## STEP

1. Download And Install Xampp Server Locally
2. To work on project we need to download the WordPress Locally
3. To Build Website using WordPress locally we need to connect it with Xampp Server
4. Setup Username and password for login to dashboard
5. In this milestone we need to build a website based on the domain selected
6. And after creating make Account for hosting your website(For e.g-GoDaddy)
7. Then migrate our website from local to a Server
